

Corridors

Wildlife corridors are a way of keeping areas of habitat connected even when development cuts off areas that were previously linked.

They allow animals to move safely across large areas. They can take many forms including; hedgerows, road verges, field margins and urban gardens.

Game rules

- The grid already contains roads and rivers.
- You must add 30 green habitat squares and 30 red town squares to the grid.
- You need to make sure there is a green path from the start to the end that animals can follow safely.
- You can move between squares that are next to each other, but not diagonally.
- Whenever your route has to cross a road or a river you must invent a safe way for animals to cross it.

Draw and describe your invention below:

Loss of forests causes more CO² emissions than all the world's transport.

End

[illegible]

Heathland is a rarer habitat than rainforests.
