

Bug Hotel

Help insects get through the winter by building a bug hotel. Make sure it's got lots of different materials, gaps and crevices so that lots of different kinds of insects can live there.

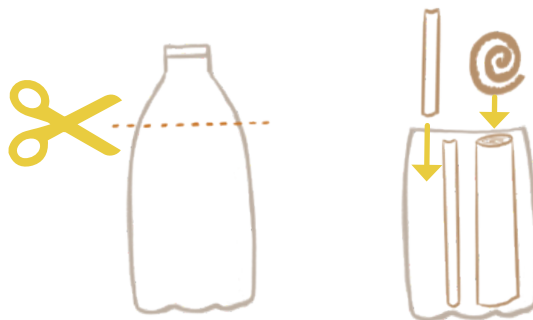

STEP 1

In groups, stack up your pallets or bigger pieces of wood in between bricks so that you end up with little sections.

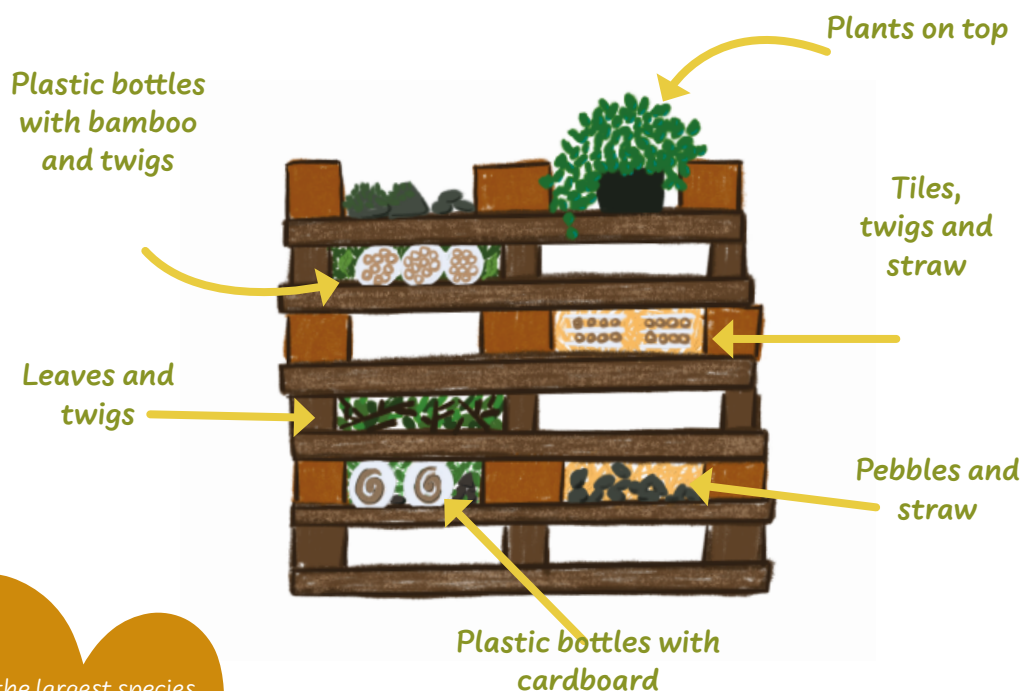

STEP 2

Fill your plastic bottles with the bamboo canes or rolled up cardboard. Make piles of tiles and twigs.

STEP 3

Fill in the gaps with straw, leaves, twigs and pebbles. Make all the sections different and fill all of them up. Add plants to the top.

The stag beetle is the largest species of insect to be found in the UK.
